FIELDHQ unit staff manual

A guide for unit staff using the roster, personnel records, events and attendance tools. You do not need hosting access to do unit work.

For server administration, see the full user manual. For help with your login or permissions, contact your unit administrator or panel administrator.

Contents

5 Assignments and positions

6 Qualifications and promotions

7 Events and attendance

8 SOPs, loadouts, awards and campaigns

9 Unit administrator tasks

10 Common problems

11 Quick reference

1. Getting started

1 Open the panel address supplied by your administrator.

2 Sign in using your panel username and password. Staff use the normal panel login page.

3 Unit-only staff land in **Units & rosters**. If you also have hosting access, choose **Units** or **Units & rosters** in the navigation.

4 Select your unit. If you belong to several units, check the selected unit before editing anything.

5 Choose a workspace area, then its page.

A panel account is your login. A roster record is a person in a unit. Most roster members do not need panel accounts.

Use **Account settings** to change your password or color theme. Your theme changes your colors, not the unit's branding or page layout. Original also gives panels and controls square corners and firmer borders.

Help while you work

Choose **Help** in the panel header for guidance on the current unit page. Follow the links to read the full unit staff manual inside the panel, search its text, or download the PDF. Help does not discard edits in your current form.

2. Your access and workspace

Ordinary staff see only their assigned units. Panel administrators have broader access. There are three unit roles:

Role	Access
Staff	Manage rosters, notes, assignments, qualifications, promotion reviews, events, attendance, SOPs/loadouts, awards and campaigns in assigned units
Member	Read their unit roster and published resources, acknowledge reading, RSVP and view their own profile; no staff notes or hosting controls
Unit administrator	All Staff functions, plus staff access, rank rules/catalogs, structure, branding and permanent member deletion

There are no individual permission checkboxes. Existing Staff assignments keep the standard Staff permissions after the update. A unit role does not grant permission to start, stop, configure or update game servers; hosting access is assigned separately.

Where to find things

Workspace area	Pages
Overview	Dashboard, Analytics
Roster	Roster, Qualifications, Promotions, Awards
Operations	Events, Attendance, Campaigns, Linked servers
Resources	SOPs & loadouts, Rank rules & catalogs
Administration	Structure, Accounts & access, Customization; available when permitted

The unit Dashboard summarizes staffing, upcoming events and work awaiting review. Analytics summarizes recorded trends. **Linked servers** provides basic health for the unit's servers; opening their hosting workspace needs separate access.

If a button is missing or disabled, ask an administrator to check your unit role. Linking a server to the unit or linking your account to a member does not grant that permission.

Workspace navigation

Unit pages use the same grouped sidebar pattern as server workspaces. Choose a unit at the top of the sidebar; permitted pages are always visible under group headings. On phones, use **Menu** to open navigation. **Hosting** and **Units** switch workspaces in the top bar; Help and account controls are on the right. All Servers is a full-width landing page without a server sidebar. Its attention strip shows confirmed server errors, unavailable status and low panel-disk space, with links to the affected server or Storage; it is hidden when clear. Panel administrators can open **Panel users** directly from the landing page.

Member home and self-service

Members use the same `/login` page as staff. Unit Staff can create a linked Member account using **Create login** on an active roster record. Unit administrators can also create accounts under **Administration → Accounts & access**. Members land on **Overview → My unit**. Staff can open the same page to manage announcements, see document review reminders, and inspect event RSVPs.

- **Required reading:** staff open an SOP and choose **Reading & review**. Assign everyone with a unit login, selected positions / primary billet names, selected qualifications, or a combination. Audiences are combined as “matches any.” A reading deadline is optional. Position and qualification targeting requires an active linked roster record; “everyone” includes unlinked logins. The progress list shows who has acknowledged the current published version.
- **Acknowledging a document:** open it from **My unit → Required reading**, read the published copy, then choose **I have read this version**. This records a personal acknowledgement, not proof of comprehension. Republishing creates a new version and requires a fresh acknowledgement. An old open document cannot acknowledge a newer publication.
- **SOP review reminders:** in **Reading & review**, assign an active unit staff owner, last-reviewed date and next-review date. Staff see due and overdue reviews on **My unit**. Review dates are reminders and never automatically unpublish or change a document. After reviewing, update the dates; publish separately if the content changed.
- **Announcements:** Staff use **My unit → New announcement**. Enter a title and message, optionally pin it or set a show-through date. **Manage latest 100 announcements** includes expired and archived entries for editing or restoration. These are messages inside the panel; no Discord or email delivery is involved.
- **RSVPs:** under upcoming events, choose Attending, Tentative or Unavailable, or clear your response. An active roster link is required. Responses close when the event starts. Staff see names and totals; ordinary members see only their own response. Editing an event invalidates responses to the previous event version, so members must respond again. An RSVP never changes UUID attendance, attendance expectations, LOA or an excuse decision. Upcoming event briefings and locations are visible to members.
- **My profile:** members see their own game name, Discord handle, status, rank, primary billet, join date, last promotion date, qualification award dates and the latest 100 finalized tracked attendance results. The displayed attendance rate includes expected Present / Absent decisions only. Staff notes, qualification notes, attendance reasons, UUID evidence and administrative history are excluded. Ask staff for corrections; this page does not edit the roster.

  Published reading and announcements work without a roster link. Personal profiles, targeted reading and RSVPs require the login-to-member link. Unit and hosting permissions remain separate.

3. Daily staff workflow

Before an event

1. Select the correct unit.
2. Check the event's server, start time, timezone, duration and attendance tracking.
3. Confirm new members have their correct recorded UUID linked.
4. Review Active, Reserve and LOA statuses.
5. Coordinate server readiness with hosting staff if you do not have server access.

After an event

1. Open the event and review attendance evidence and any collection gaps.
2. Make corrections with reasons.
3. Finalize the event after it has ended, when permitted.
4. Record earned qualifications, personnel notes or award issues as appropriate.
5. Review promotion eligibility; eligibility does not itself promote anyone.

Save each form and wait for success before closing or switching units. If the panel reports that data changed, refresh and review the latest records rather than trying to overwrite another staff member's work.

4. Roster and member records

Find a member

Open **Roster → Roster**. Search and use the available filters to find the person. A unit may show a flat member list, organized billets, or both views. Groups and ranks are optional.

Open the member's record for personnel details, dated notes, qualifications, awards, attendance and the recorded change timeline.

Add or edit a member

With roster permission:

1. Add a roster member, or open an existing member's editor.
2. Enter the game name and optional Discord handle.
3. Select Active, Reserve or LOA.
4. Enter the joined date and, if used, rank structure, rank, last-promotion date and primary billet.
5. Assign qualifications and save.

A person can belong to multiple units with different names, ranks, qualifications and statuses. Updating this unit's record does not update their other units.

Link their game identity

In the editor's **Recorded player UUID** section:

1. Search their recorded name or UUID.
2. Select the correct identity from players observed on this unit's linked servers.
3. Save the member.

A matching display name is not enough for automatic attendance; it uses the linked UUID. If no identity is available, leave it unlinked and return after the person has been recorded on a linked server. Ask hosting staff to check player detection if recording is unavailable.

Link their panel account

If the member already has a login, a unit administrator can select their **Linked panel account** and save. This gives the panel an association between the login and the person's name in this unit.

The link does not create a login or grant access. The unit role is assigned separately.

Write a personnel note

1. Open the member record.
2. Read existing notes for context.
3. Add the new note and save.
4. Confirm it appears with its date and author.

When your account is linked to your own member record in this unit, note authorship uses your unit name. If you use another name in a different unit, that unit's link supplies its own name. Ask an administrator to correct your link if authorship is wrong; do not change the subject member's identity to fix the author.

The member timeline records changes from when history collection began. Older records may have an upgrade baseline rather than a complete earlier history.

Status, archive or delete

Choice	Use it when
Active	The member is normally expected at tracked events
Reserve	Attendance is optional
LOA	The member is on leave and excused from attendance expectations; record an optional end date
Former member / archive	They have left, but their personnel record should be retained
Permanent deletion	An authorized administrator intends to remove the personnel record and its notes/history

Archiving is the normal choice when you want to keep a former member's record. Permanent deletion is a separate administrator action with confirmation. Captured historical event attendance snapshots remain even after a roster record is deleted.

Bulk changes and CSV

Bulk edit… lets permitted staff select members for supported qualification, status or assignment changes. Review the before/after list before confirming. Section moves need enough open billets; insufficient space or a stale roster rejects the batch.

CSV export provides a spreadsheet copy of roster information. Exporting does not create a full panel backup.

5. Assignments and positions

A flat roster needs no organization structure. Units using slots organize people into:

- **Groups:** broad containers, such as a platoon or staff organization.
- **Sections:** subdivisions, such as HQ, a squad or a mortar section.
- **Billets:** actual assignable slots, such as Platoon Sergeant, Vehicle Commander or Company Medic.

Position suggestions are reusable names. A suggestion alone does not create or fill a billet.

To assign someone, use the formation roster or the member editor’s **Primary placement** field. Each formation can contain named billets and directly assigned members without billets. A person has one primary placement. For an occupied billet, choose Swap placements or leave the displaced member unassigned. Empty billets remain visible; directly assigned members do not consume slots.

Rank and qualifications do not block billet assignments. Use your unit's own staffing policy when deciding whom to place.

Unit administrators create and remove groups, sections and billets in **Administration → Structure**. Removing organizational items and permanently deleting a member are different actions; read the form's consequences before saving.

6. Qualifications and promotions

Grant or correct a qualification

1. Open **Roster → Qualifications**.
2. Find the member and qualification in the matrix.
3. Open the cell.
4. Grant the qualification or correct its date, issuer and notes, then save.

Use search and status/group/section filters to inspect coverage. You can also identify who holds or lacks a qualification. Revocation requires the relevant edit access.

Older qualifications may lack original award dates or issuers. Enter known details rather than inventing them; the timeline separately records your correction. Existing qualification metadata is retained when a bulk grant includes someone who already holds it.

Understand promotion eligibility

The member needs:

- The correct rank structure and current rank.
- A configured next rank.
- A last-promotion date.
- Enough elapsed time and the next rank's required qualifications.

The panel adds **the next rank's time requirement** to the last-promotion date. For example, a 30-day requirement after June 1 gives July 1. Reaching that date does not satisfy missing qualifications.

Marine, Medical and Officer paths can have separate rules. An optional paygrade label does not combine their progression.

Review a promotion

1. Open **Roster → Promotions**.
2. Review the member's readiness and missing requirements.
3. Choose **Review promotion** when eligible and permitted.
4. Review the proposed rank/date, enter the required staff note and confirm.

The panel rechecks eligibility and record changes before applying. A stale record needs another review. **Promotions are never automatic.** Follow the unit's approval policy even when the panel says someone is eligible.

Rank paths, time requirements and qualification names are maintained by permitted administrators in **Resources → Rank rules & catalogs**.

7. Events and attendance

Create an event

With event permission:

1. Open **Operations → Events** and choose **New event**.
2. Select this unit's linked server.
3. Enter the local start time, explicit timezone and duration.
4. Enable attendance tracking if attendance should count.
5. Set recurrence if needed and save.
6. Review the calendar entry.

Weekly, biweekly and monthly recurrence creates separate occurrences. When editing a series, check whether the action affects one event or the remaining series.

Creating an event does not reserve or automatically start the game server. Coordinate shared-server use with hosting staff.

What automatic attendance counts

A linked UUID observed once on the event's selected server during its tracked event window is enough for Present. Logging in outside an event does not count.

Collection needs a running panel service and a successful live player query. Sampling normally occurs about every 30 seconds; a brief connection between samples may be missed.

The event's membership list follows roster changes until the event starts, then preserves names, UUIDs and expectations. A joined date excludes events before membership.

Membership status is not an attendance outcome

Roster status	Event expectation
Active	Normally expected
Reserve	Optional
LOA	Excused

Present, Absent, Excused and Unknown describe event outcomes. They are separate from the person's roster status.

Review, correct and finalize

With attendance permission:

1. Open the event after it ends.
2. Inspect UUID evidence and collection gaps.
3. Review uncertain outcomes. Missing evidence during an outage is not proof of absence.
4. Save corrections with the required reason.
5. Finalize when the record is ready.

Finalized records can be reopened with a reason when correction is needed. Cancelled events are excluded from reporting.

Use **Operations → Attendance** for the monthly member/event grid, server filtering and CSV export. Normal attendance percentages include finalized, expected Present/Absent decisions. Optional Reserve, LOA/Excused, Unknown and pending decisions are excluded.

Member records show recent attendance, but the Attendance page is the place to inspect the unit's monthly results.

8. SOPs, loadouts, awards and campaigns

SOPs and loadouts

Under **Resources → SOPs & loadouts**, search by category, role or text. Permitted staff can maintain SOP text and external links, or loadouts with an image URL, kit slots, alternatives and notes. Archive obsolete references to retain editing history.

The unit’s SOP repository includes category filtering, full-text search and sorting by title or update date. Staff and unit administrators can create and edit documents in their own units; panel administrators can access all units.

To create a document:

1. Choose **SOPs → New SOP**, then enter a title and category.
2. Write the procedure in **Write SOP**, add an external reference link, attach a PDF or Word document, or combine these. Use **Heading**, **Bold**, **Italic**, **List** and **Link** to format selected text, and **Preview** to see the rendered document.
3. Start a line with #, ## or ### followed by a space to create a section heading. The reader builds a clickable contents sidebar from these headings. Bold, italic, links and uploaded images are rendered; arbitrary HTML is not rendered.
4. Save, then open the SOP to read it or choose **Download text** for a `.txt` copy.

Revision history shows the latest 50 saved changes with the editor’s unit name and time. Choose **View revision** to read a previous saved version, then **Back to current document** to return. Viewing history does not change the current SOP; restoring a revision explicitly replaces the working draft. Use **Edit reference → Archive this reference** to retire a document, and switch the library to **Archived** to find or restore it. **Add images / documents** accepts PDF, Word (`.doc`/`.docx`), PNG, JPEG and WebP files. Images are inserted at the cursor; PDF and Word attachments download for viewing in your own application. Images are limited to 4 MB, documents to 20 MB, with up to 10 files and 50 MB per save. Each unit can retain 200 MB of attachments, with up to 50 files per document. Files are private to the unit and stored in the panel database, so database backups include them. Pending uploads can be removed before saving. Saved attachments remain available for document history, including after archiving. New revisions record their attachment list; older revisions created before attachment support have no attachments.

Folders, publishing and templates

- Use **Folder path** to organize pages, for example `Operations/Infantry`. The folder sidebar shows the hierarchy and page links. Editing a page's path moves it; folders appear when pages use them.
- New SOPs and edits to published SOPs default to **Draft**. Drafts are visible to staff only. If a document already has a published copy, members continue reading that copy while staff edit. Choose **Published** when saving to replace the member copy. Existing references are preserved as published during upgrade. Archiving hides a document from members.
- Choose **Template** to save a reusable outline for staff. Templates are excluded from member views. In a new SOP, **Start from a template** offers built-in procedure, communications, training and medical outlines, plus your unit's saved templates. The template reader also offers **Create SOP from template**. Template attachments are copied into the new SOP when saved and count toward the unit storage limit. Converting an existing published SOP to Template removes its published copy.
- In **Revision history → View revision**, expand **Compare with current document** to see changed metadata and body lines side by side. Highlighted rows differ at that line number. **Restore as draft** restores the selected revision's contents and attachment selection; staff must publish it separately. Saved files remain retained for historical versions.
- Under **Related SOPs, qualifications, positions and events**, select relevant items from this unit. Related SOPs open directly from the reader. Qualification, position and event associations appear as reference labels. Members see only published related SOPs and qualification / position labels; staff event records stay private; upcoming briefings and locations appear on My unit.

Awards

Under **Roster → Awards**, permitted staff maintain the medal/badge catalog and issue awards with a date and citation. These awards are separate from promotion qualifications.

Repeated issues require explicit confirmation. Revocation requires a reason and retains the original issue. Issued names/images are preserved if the catalog later changes.

Campaigns

Under **Operations → Campaigns**, permitted staff group events using a timezone-aware date window or explicit selection, set a participation threshold and optionally link an award.

Campaign progress uses confirmed Present outcomes against eligible finalized events. Reserve events count here; LOA and Excused are exempt. Unknown is unconfirmed. This differs from the normal attendance percentage.

Complete the campaign and finalize its tracked events before approving member awards. Date-window campaigns must reach their end. The panel does not automatically grant or revoke campaign awards.

Analytics

Under **Overview → Analytics**, choose a date range and timezone to inspect recorded strength, membership changes, retention and finalized attendance trends. Charts also have table data.

Collection starts when the feature is installed; earlier history is not reconstructed. Rank distribution describes the current roster.

9. Unit administrator tasks

This section is for staff who also hold unit administrator authority.

Accounts & access

1. Open **Administration → Accounts & access → Add account**.
2. Choose **Create new login** and enter a username and initial password, or use an existing account. Choose Member, Staff or Unit administrator.
3. Optionally link the account to its member record in this unit.
4. Save and confirm the assignment.

Panel and unit administrators can create new unit logins through this flow. Give the credentials and the panel's `/login` address to the person. Member logins land on My unit and can view their own linked profile. They cannot open other members' records, staff notes, drafts or server controls. Link the login to a roster member when applicable. Hosting permissions are assigned separately by panel administrators.

Removing unit staff access does not delete the login, remove the roster record or revoke separately assigned server roles. Review those separately when someone leaves.

Structure and catalogs

Create groups, sections and billets in Structure. Maintain independent rank paths, qualifications and position suggestions under Rank rules & catalogs. Review the effect of rule changes on existing members' eligibility.

Branding

Use **Administration → Customization** for the unit description, icon and banner. PNG, JPEG and WebP images up to 4 MB each are supported. Use a square icon and wide banner, preview them and save.

Branding belongs to the unit. Personal color themes remain independent.

Panel administrators handle unit creation and server linking. Unit administration does not by itself grant game-server controls.

10. Common problems

Problem	What to check
My unit is missing	Ask an administrator to verify your unit staff assignment.
I can read a page but cannot edit	Ask an administrator to check whether the task requires Unit administrator.
I cannot open a linked server	Hosting access is separate; contact hosting staff.
A member has no recorded UUID to select	Confirm the unit links the correct server, then have the player connect and check player recording with hosting staff.
Attendance did not mark someone Present	Check linked UUID, selected server, event window/tracking and collector evidence.
An attendance outcome is Unknown	Review collection gaps and available evidence; do not assume it means Absent.
Promotion readiness has no date	Check structure, current/next rank and last-promotion date.
The date passed but the member is not eligible	Check missing qualifications and whether the member is archived.
A note uses my login name instead of my unit name	Ask an administrator to link your account to your roster record in this unit.
A slot move fails	Refresh the roster and check available billets in the destination section.
Saving reports that the record changed	Reopen/refresh, review the latest information and reapply the intended edit.
Historical charts have gaps	Earlier history may not have been collected. Review the stated collection period.

When asking for help, include the unit, page, member/event concerned, time and exact error. Do not share passwords. Include screenshots only where the recipient is authorized to see the personnel information.

11. Quick reference

I need to…	Go to…
Add or edit a member	Roster → Roster
Write a personnel note	Open the member record
Link a UUID or panel account	Edit the roster member
Change Active/Reserve/LOA	Edit the roster member, or permitted bulk editing
Move someone into a position	Primary billet or the slot's assignment controls
Grant a certification	Roster → Qualifications
Review eligible promotions	Roster → Promotions
Create an operation	Operations → Events
Correct/finalize attendance	Open the event
Review a month or export attendance	Operations → Attendance
Find unit SOPs or kits	Resources → SOPs & loadouts
Issue a medal	Roster → Awards
Check campaign participation	Operations → Campaigns
Assign unit staff access	Administration → Accounts & access; administrator permission required
Edit icon or banner	Administration → Customization; administrator permission required

Before saving: check the unit, person/event, dates and proposed change. **After saving:** wait for success and confirm the record reflects the intended result.

Formation builder and Member logins

In **Structure**, select a formation in the navigator to edit or move it, add smaller formations, or add several billets using `Name | count` lines. **Copy empty layout** duplicates the structure without its member assignments. Removing a branch leaves its members unassigned and retains their records. The **All members** roster remains available for units that do not use formations.

Unit Staff can use **Create login** beside an active roster member or inside their record. Enter a username and initial password; the panel creates and links a **Member** account for this unit only. Hand the credentials and the panel's `/login` address to the member. This action cannot grant Staff, administrator or hosting permissions. Existing linked accounts are managed through Accounts & access by administrators.

The roster opens on **All formations** when a structure exists. Group tabs filter the formation tables. Click a member's name to open their record or click **— Open —** to fill an empty billet. Members assigned directly appear after the named billets with a dash in the Billet column. Use **Manage structure** for layout changes, occupied-billet swaps and direct formation assignments.

Member access, dated LOA and reusable billets

Members can view the current roster of their own unit, including names, ranks, callsigns, qualifications and placements. Staff notes, Discord handles, UUIDs, account details, promotion records and former members are excluded from this read-only view. Members cannot change assignments or open staff records.

Staff use **Manage assignments** to assign members to formations and billets. Only administrators can create, rename, reorder or remove structure items. Unit administrators can use a member record's **Access → Change unit role** action to promote a Member to Staff; rank promotion never changes account permissions automatically.

Staff member records have **Overview, Qualifications, Attendance, Awards, History, Notes and Access** tabs. Qualification details include award dates, instructor and notes. Promotion review remains manual, with an additional next-30-days filter. Unsaved notes are preserved while switching record tabs and guarded when opening another editor.

Select LOA and enter optional start/end dates in Edit member. Dates are inclusive; a blank start begins immediately and a blank end is indefinite. Event expectations use the event's local date. Members return to Active after the end date; the stored status and history update when the unit roster is opened. Active and past event snapshots stay unchanged. Bulk status changes clear previous LOA dates when the status changes.

Administrators manage saved billet titles through **Manage structure → Billet types**. Existing slot titles and legacy position labels are carried over. Select a saved title and quantity when adding slots. Set callsigns on individual slots, not on the saved type. An occupant inherits the slot's callsign unless their member record has a personal override. Moving or unassigning the member updates the inherited callsign. Empty layout copies omit callsigns to avoid duplicating radio identifiers. Removing a saved type preserves existing slots and occupants.

Unit administrators can reset a Member login's password, disable access to this unit, or restore it through the record's Access tab. Disabling unit access does not disable other units or hosting permissions. Password resets invalidate existing login sessions. Accounts shared between units, linked to hosting, or holding panel authority require a panel administrator for password resets. Staff/admin memberships are managed through Change unit role or Accounts & access.

Editable demo company

Panel administrators can choose **Create demo unit** at the top of Units. Confirm **Create / open demo** to create **Demo Company — Training Sandbox**. Reopening the action preserves existing demo edits rather than making another copy.

The demo contains 48 fictional members: company HQ, two platoons, four squads and eight teams. Leadership/support personnel hold 24 named billets; 24 troops belong directly to teams, and three billets are vacant. Six published SOPs, six sample kit references, qualification awards, promotion examples, staff notes, callsigns and Active/Reserve/LOA examples are included.

The demo is an ordinary editable unit. It creates no passwords, player UUIDs, game servers or server links. To try Member access, create a login from one of the demo roster records and sign into that account separately. Sample kit references do not apply equipment in game. Keep real personnel and server links in your real units.

Formation rosters are collapsible: companies/platoons start open and deeper formations start closed. Expand all / Collapse all controls affect the current view, and parent-path links open and jump to the parent formation. Search temporarily opens matching branches. Expansion choices are retained while the unit workspace remains open.

Analytics includes an interactive current-rank bar chart. Filter by rank structure, then click a bar to see matching member names and open their staff records. Counts and percentages describe the current roster, independently of the historical date range.

Panel-wide login administration opens on its own **Panel users** page at `/admin/users`, accessible from the header to panel administrators. It is independent of the selected unit and never appears below a roster. Unit administrators continue using their unit's **Accounts & access** page for local role management.
